

Add WeChat powcoder

Project 2

Microcoded Instruction Set Processor

- ▶ Project 2 in incremental steps
- ▶ modifications are required:
 - ▶ Increase the number of registers in the register-file from 32 to 33
 - ▶ This requires an additional select bit for the two multiplexers (Bus A and Bus B) and the destination decoder. These are separate signals (TD, TA, TB) that are provided by the Control Memory
 - ▶ The size of the registers in the register-file has to be 32 bit (size of instructions)

Datapath Modifications

- ▶ Consequently, all components of the Datapath:
 - ▶ MUXs in the Register file
 - ▶ Decoder in the Register file
 - ▶ Arithmetic/logic Unit
 - ▶ Shifter and MUXs ...
- ▶ are 32 bit

<https://powcoder.com>

Add WeChat powcoder

Datapath Modifications

- ▶ Add and test:

- ▶ Memory M (812 x 32)

- ▶ Control Memory (256 x 42)

- ▶ to your project.

- ▶ MUX M will feed 32 bit addresses from either the Bus A or the PC into the Memory M entity but only the 9 least significant address bits will be used to index into the array. This restricts the memory size to 512.

Control Memory 256 x 42
